

CEROLL

Machine de Marquage à chaud à Roue silicone

Silicone roller hot stamping machine

The CEROLL machine adds color by hot stamping plastic objects. The application is carried out continuously using a silicone roller heated by infra-red radiation.

Two standard models are offered:

CEROLL-100, high speed for spirit caps, or similar objects. Very high performance, up to 10,000 caps per hour. Automatic distribution of objects offered as an option. Certified to European CE safety standards.

CEROLL-200, mainly recommended for large objects. High-performance. Certified to European CE safety standards.

Associated equipment:

- Double production, up to 20,000 parts per hour
- Supply of parts using a vibrating bowl.
- Commissioning and training
