

MPC

Multi-head machine for hot stamping

The MPC (multi-printing center) is a design developed by CER to meet the applications of hot stamping on complex forms, especially for mascara caps and bottles. The machine can integrate up to 6 heads for hot stamping (with the MP-50) using pneumatic or digital technology. The MPC also includes additional functions for online or offline production. Its modular design and its many technical innovations ensure very high-quality production and high throughput, up to 3,500 items per hour.

Associated equipment:

- CVI: 100% quality control of the objects.
- Application of image transfer film.
- Magnetic plate for quick exchange of silicone dies.
